ADYA CHEMICAL REDUCTION TEST REPORT

Report # 13-345 (Adya Clarity)
Report Date: 10/31/2013
Customer Name: Adya, Inc.

EXECUTIVE SUMMARY

Six different batches of challenge water prepared with mixes of Pesticides, Semivolatile Organic Compounds, Basic Drugs, Pharmaceutical Drugs, Herbicides, and Fungicides at concentrations stated by NSF Standard 53 (when applicable) for each compound were treated with Adya Clarity for 24 hours and then filtered through Adya Filter System. The challenge water and the filtered water were analyzed using approved EPA methods of analysis (when applicable) and reported to determine the effectiveness of the Adya Clarity treatment and filter system removing these contaminants.

INTRODUCTION

Six different batches of challenge water prepared with mixes of Pesticides, Semivolatile Organic Compounds, Basic Drugs, Pharmaceutical Drugs, Herbicides, and Fungicides at concentrations stated by NSF Standard 53 (when applicable) for each compound were treated with Adya Clarity for 24 hours and then filtered through Adya Filter System. The challenge water and the filtered water were analyzed using approved EPA methods of analysis (when applicable) and reported to determine the effectiveness of the Adya Clarity treatment and filter system removing these contaminants. The procedures and results are summarized as follows.

REAGENTS, MATERIALS, AND LAB EQUIPMENT

Hewlett Packard GC/MS 5890/5972.

Hewlett Packard GC/ECD 5890.

DI water ASTM reagent type 3.

Restek Semivolatile, Pesticides, Basic Drugs, Pharmaceuticals, Herbicides, Fungicides Standards.

Adya Clarity.

Adya Filter System.

PROCEDURE

Challenge Water preparation:

The Pesticides challenge water was prepared by adding an aliquot of the Restek standard to 1 liter of water to get a concentration of about 50 µg/L for each compound (except for some specific compounds). Added 2 mL of Adya Clarity to the challenge water and let it sit for 24 hours. Passed the challenge water through the Adya Filter System, collected a filtered water sample and tested it for Pesticides along with the challenge water sample using the EPA method 508.

The Semivolatiles challenge water was prepared by adding an aliquot of the Restek standard to 1 liter of water to get a concentration of about 50 µg/L for each compound. Added 2 mL of Adya Clarity to the challenge water and let it sit for 24 hours. Passed the challenge water through the Adya Filter System, collected a filtered water sample and tested it for Semivolatiles along with the challenge water sample using the EPA method 525.

The Basic Drugs challenge water was prepared by adding an aliquot of the Restek standard to 1 liter of water to get a concentration of about 20 µg/L for each compound. Added 2 mL of Adya Clarity to the challenge water and let it sit for 24 hours. Passed the challenge water through the Adya Filter System, collected a filtered water sample and tested it for Pesticides along with the challenge water sample using Standard GC/MS Methods of Analysis.

The Pharmaceuticals challenge water was prepared by adding an aliquot of the Restek standard to 1 liter of water to get a concentration of about 20 µg/L for each compound. Added 2 mL of Adya Clarity to the challenge water and let it sit for 24 hours. Passed the challenge water through the Adya Filter System, collected a filtered water sample and tested it for Pharmaceuticals along with the challenge water sample using Standard GC/MS Methods of Analysis.

The Herbicides challenge water was prepared by adding an aliquot of the Restek standard to 1 liter of water to get a concentration of about 150 µg/L for each compound (except for some specific compounds). Added 2 mL of Adya Clarity to the challenge water and let it sit for 24 hours. Passed the challenge water through the Adya Filter System, collected a filtered water sample and tested it for Pesticides along with the challenge water sample using the EPA method 515.

The Fungicides challenge water was prepared by adding an aliquot of the Restek standard to 1 liter of water to get a concentration of about 20 µg/L for each compound. Added 2 mL of Adya Clarity to the challenge water and let it sit for 24 hours. Passed the challenge water through the Adya Filter System, collected a filtered water sample and tested it for Fungicides along with the challenge water sample using Standard GC/MS Methods of Analysis.

RESULTS

Table 1
Pesticides Influent Water Properties

Parameter	Influent Water	NSF/ANSI Standard 53 Target (Section 7.2.1.5)
pH	7.60	7.50±0.5
Temperature	19.0	20±3°C
TDS	220 mg/L	200 to 500 mg/L
TOC	1.6 mg/L	>1.0 mg/L
Turbidity	0.55	<1 NTU

Table 2
Pesticides Effluent Water Test Results

Pesticides Parameter	Influent Water Concentration in µg/L	Adya Clarity Filter System Effluent Concentration in µg/L	% Reduction
